- Experience with Redux for state management.
- Knowledge of API integration, debugging tools, and platform-specific code.
- Proficient in Java/Kotlin for Android.
- Skilled in Android SDK/Studio.
- Familiar with XML layouts, RESTful API, SQLite/Room, Lifecycle etc.

## Work Experience

### ● Capanicus

React Native / Android Developer

May 2022 - Present

As a mobile application developer specialising in React Native and Android, my responsibilities include creating and maintaining mobile applications for our company. I focus on implementing technical features such as real-time chat, video calling, location-based services, VoIP Call and Push Notification etc. ensuring they function seamlessly across platforms.

### ● Toxsl Technologies Pvt Ltd

Android Developer

July 2021 - May 2022

As an Android developer, I create robust applications with RESTful API integration and secure payment gateways. I prioritize app performance with efficient memory management and responsive UI design, while staying current with technologies like Jetpack and Kotlin coroutines for ongoing innovation.

## Project Highlights

### ● GoIDD - Unified Communication App

As the Lead React Native Developer for GoIDD, I spearheaded the creation of an all-in-one communication platform integrating VoIP, video calls, SIP calling, chat, socket-based messaging, virtual numbers, dialer, and meetings. I ensured seamless iOS and Android compatibility while implementing high-quality VoIP and video calls using React Native. Additionally, I collaborated on design, deployment, and ongoing feature enhancements, conducting thorough testing to maintain stability and user satisfaction.

### ● Dedicate Fitness: Subscription-based Fitness App

Dedicate Fitness is a subscription-based fitness application where users can access exclusive content from fitness models, including audio, videos, and workout calendars. Users subscribe to their preferred fitness models to unlock access to their content and join their workout calendars. Additionally, users can message their subscribed models to ask questions. The app also features Dedicoins Tracker, where users earn Dedicoins by walking (1 calorie = 12 Dedicoins), which they can share with other users or award to specific posts.
